Excerpt from Reproductive Cycles in Tropical Reptiles

At Tortuguero on the Caribbean Coast of Costa Rica, green turtles lay most of their eggs in July, August and September, with the peaks in August - entirely within the rainy season. Females in their first breeding season lay an average of clutches, with an average of eggs per clutch. An average interval of days intervenes between clutches. Old adults lay an average of clutches with a mean of eggs per clutch. For this population the usual interval between egg-laying seasons is three years, but some individuals are on a 2-year or 4-year breeding cycle. The age at sexual maturity is not definitely known, but is estimated to be in the range of 10-15 years (bjorndal).

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com)

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
