Handbook of Acid-Proof Construction

Friedrich Karl Falcke, G. Lorentz

Handbook of Acid-Proof Construction Friedrich Karl Falcke, G. Lorentz

A new and completely revised edition of a standard work on the design of acid-proof constructions. Written by leading authorities, it describes tried and proven practices as well as new developments and recent findings concerning methods and materials. Among the applications considered are the acid protection of buildings, plants and chimneys, and of equipment, tanks, and columns. One chapter is devoted to special cases in various industries ranging from the textile, cellulose, and pulp industries to reactor construction and the food industry. An appendix compiles German, British, and American standards. This handbook represents the only collective work of this type in international technical literature. It will be of great practical value to engineers and architects in the chemical, metallurgical, food, textile, and other industries.
