## **Drones for Conservation - Field Guide for Photographers, Researchers, Conservationists and Archaeologists** Kike Calvo

The pace of technological change is breathtaking. Current cell phones have the capacity that main frame computers did when I was a graduate student. Molecular biology uses technology that changes on almost a daily basis.

And now drones are upon us. Their ubiquity and uses proliferate faster than needed good sense of where they are appropriate and when not. But what about clear positives, like aiding conservation?

**Drones for Conservation** is essentially just in its infancy, but while we can lament the possible consequent avoidance of a good slog of a field study, we can already see multiple benefits falling from the skies as it were. Yes there are insights that can only come from careful on the ground field research, but the ability of drones to soar over the conservation priority at hand is rapidly empowering conservation and conservation science.

Kike Calvo, a highly talented National Geographic Creative photographer and conservationist, had the prescience to understand the potential of drones. And much as the photographer that he is likes to share his images, Kike as a conservationist, has generously created this book to share some early and great examples in which conservation has benefited from this 21st century emerging technology.

So **Drones for Conservation** is very much a first. With actual examples from around the world, it also has very practical sections on how to use drones effectively - as usual there is never a substitute for carefully thinking out a project in advance. This comes at a time when the pressure on nature and biological diversity is unprecedented, and, unfortunately, accelerating. So anything technology can do to make the collective conservation enterprise more effective is highly welcome and will benefit future generations.

The conservation and science conservation community owe a debt of gratitude for this energetic young photographer and conservationist. Knowing him, the preferred form of payment is in conservation and science.
