Cellular Aging and Cell Death (Modern Cell Biology)

Cellular Aging and Cell Death (Modern Cell Biology)

Cellular AGING AND CELL DEATH

Edited by Nikki J. Holbrook, George R. Martin, and Richard A. Lockshin

Cellular Aging and Cell Death provides a thorough understanding of the mechanisms responsible for cellular aging, covering the recent research on programmed cell death and senescence, and describing their role in the control of cell proliferation and the aging process. This one-of-a-kind book is the first to combine the two hottest research areas of cell biology into one comprehensive text.

Leading experts contribute to give readers an authoritative overview of the distinct fields of cellular aging and programmed cell death, as well as to demonstrate how both fields are critical to understanding the aging process. They address the large and growing interest in apoptosis, especially with regard to the molecular signals that induce and regulate programmed cell death, and the role of apoptosis in a variety of age-associated diseases and disabilities. Throughout the book, a strong emphasis is placed on the interrelationship of the molecular, cellular, and physiological aspects of senescence.

Individual chapters discuss such topics as the role and regulation of apoptosis in development, the potential impact of cell death on such postmitotic tissues as nerve and muscle, and suggest that programmed cell death plays an important role in both pathological and nonpathological aspects of aging, including neurodegenerative diseases.

One important chapter focuses on the most recent research involving the study of telomeres, whose reduction in length with age and cell division may underlie cellular senescence. The subject of neuronal cell death is also put into the perspective of aging.

Cellular Aging and Cell Death bridges the rapidly growing fields of cellular aging and programmed cell death. This thorough, yet concise book will be of particular interest to graduate students and researchers within the fields of cell and developmental biology, neurobiology, immunology, and physiology. Physicians and medical students involved in the fields of gerontology and pathology will also find this an informative reference.

From reader reviews:

Kenneth Kelly:

With other case, little men and women like to read book Cellular Aging and Cell Death (Modern Cell Biology). You can choose the best book if you love reading a book. So long as we know about how is important a new book Cellular Aging and Cell Death (Modern Cell Biology). You can add understanding and of course you can around the world by way of a book. Absolutely right, since from book you can learn everything! From your country right up until foreign or abroad you will find yourself known. About simple point until wonderful thing you can know that. In this era, you can open a book or perhaps searching by internet device. It is called e-book. You need to use it when you feel weary to go to the library. Let's go through.

Helen Perez:

This Cellular Aging and Cell Death (Modern Cell Biology) are reliable for you who want to be a successful person, why. The reason of this Cellular Aging and Cell Death (Modern Cell Biology) can be on the list of great books you must have is actually giving you more than just simple studying food but feed you actually with information that maybe will shock your before knowledge. This book is definitely handy, you can bring it just about everywhere and whenever your conditions in the e-book and printed ones. Beside that this Cellular Aging and Cell Death (Modern Cell Biology) giving you an enormous of experience for example rich vocabulary, giving you trial of critical thinking that we understand it useful in your day activity. So , let's have it and luxuriate in reading.

George Bash:

Do you have something that you want such as book? The book lovers usually prefer to select book like comic, brief story and the biggest an example may be novel. Now, why not attempting Cellular Aging and Cell Death (Modern Cell Biology) that give your fun preference will be satisfied by means of reading this book. Reading routine all over the world can be said as the method for people to know world considerably better then how they react toward the world. It can't be stated constantly that reading habit only for the geeky individual but for all of you who wants to end up being success person. So , for all of you who want to start studying as your good habit, it is possible to pick Cellular Aging and Cell Death (Modern Cell Biology) become your starter.

Nathaniel Mitchell:

Are you kind of busy person, only have 10 or maybe 15 minute in your morning to upgrading your mind expertise or thinking skill actually analytical thinking? Then you are having problem with the book as compared to can satisfy your short space of time to read it because all this time you only find reserve that need more time to be go through. Cellular Aging and Cell Death (Modern Cell Biology) can be your answer mainly because it can be read by a person who have those short free time problems.
