#### Mathematical Physiology (Interdisciplinary Applied Mathematics) James Keener, James Sneyd

Mathematical Physiology provides an introduction into physiology using the tools and perspectives of mathematical modeling and analysis. It describes ways in which mathematical theory may be used to give insights into physiological questions and how physiological questions can in turn lead to new mathematical problems.

The book is divided in two parts, the first dealing with the fundamental principles of cell physiology, and the second with the physiology of systems. In the first part, after an introduction to basic biochemistry and enzyme reactions, the authors discuss volume control, the membrane potential, ionic flow through channels, excitability, calcium dynamics, and electrical bursting. This first part concludes with spatial aspects such as synaptic transmission, gap junctions, the linear cable equation, nonlinear wave propagation in neurons, and calcium waves. In the second part, the human body is studied piece by piece, beginning with an introduction to electrocardiology, followed by the physiology of the circulatory system, blood muscle, hormones, and kindeys. Finally, the authors examine the digestive system and the visual system, ending with the inner ear. This book will be of interest to researchers, to graduate students and advanced undergraduate students in applied mathematics who wish to learn how to build and analyze mathematical models and become familiar with new areas of applications, as well as to physiologists interested in learning about theoretical approaches to their work.

Mathematical Reviews, 2000: "This is neither a physiology book nor a mathematics book, but it is probably the best book ever written on the interdisciplinary field of mathematical physiology, i.e. mathematics applied to modelling physiological phenomena. The book is highly recommended to anybody interested in mathematical or theoretical physiology."

#### From reader reviews:

#### **Richard Swisher:**

Reading a reserve can be one of a lot of action that everyone in the world adores. Do you like reading book so. There are a lot of reasons why people love it. First reading a book will give you a lot of new data. When you read a book you will get new information mainly because book is one of numerous ways to share the information or maybe their idea. Second, reading through a book will make an individual more imaginative. When you looking at a book especially hype book the author will bring you to imagine the story how the personas do it anything. Third, it is possible to share your knowledge to others. When you read this Mathematical Physiology (Interdisciplinary Applied Mathematics), you can tells your family, friends in addition to soon about yours publication. Your knowledge can inspire different ones, make them reading a guide.

#### **Gabrielle Oneal:**

It is possible to spend your free time to study this book this e-book. This Mathematical Physiology (Interdisciplinary Applied Mathematics) is simple bringing you can read it in the recreation area, in the beach, train and soon. If you did not have much space to bring typically the printed book, you can buy the actual e-book. It is make you quicker to read it. You can save typically the book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.

#### Harold Walsh:

Beside this specific Mathematical Physiology (Interdisciplinary Applied Mathematics) in your phone, it could possibly give you a way to get more close to the new knowledge or data. The information and the knowledge you will got here is fresh in the oven so don't always be worry if you feel like an older people live in narrow village. It is good thing to have Mathematical Physiology (Interdisciplinary Applied Mathematics) because this book offers to you readable information. Do you often have book but you rarely get what it's interesting features of. Oh come on, that will not end up to happen if you have this in your hand. The Enjoyable arrangement here cannot be questionable, including treasuring beautiful island. Use you still want to miss it? Find this book and also read it from right now!

#### **Henry Vance:**

Publication is one of source of know-how. We can add our knowledge from it. Not only for students but in addition native or citizen have to have book to know the upgrade information of year in order to year. As we know those textbooks have many advantages. Beside we all add our knowledge, also can bring us to around the world. By book Mathematical Physiology (Interdisciplinary Applied Mathematics) we can consider more advantage. Don't you to be creative people? For being creative person must prefer to read a book. Just choose the best book that appropriate with your aim. Don't become doubt to change your life with this book Mathematical Physiology (Interdisciplinary Applied Mathematics). You can more appealing than now.
